Northwest Michigan Invasive Species Network Pesticide Contract Bidding Request

The Northwest Michigan Invasive Species Network (ISN) is seeking bids for a contract to supply our crews with pesticides for our Michigan Invasive Species Grant Program (MISGP) funded Hemlock Woolly Adelgid Project. The contract would start upon completion of signing contract and expire December 31, 2025.

The current list of active ingredients and concentrations that bids are requested for are as follows:

Chemicals:

- Imidacloprid (injectable)- 10% active ingredient (only Xytect 10% infusible, Imicide-HP 10%, IMA-jet 10)
 - Must come in 1 liter bottle, Ready-to-Use for application with reloadable tree injection equipment.
- Imidacloprid 2F- 21.4% active ingredient (any works, one example Quali-Pro 2F)
- Dinotefuran 20 SG- 20% active ingredient (any works, one example Safari)

A total of approximately 200 quarts for each product is the estimated quantity for this bid request, although total purchased may be less. All bidding must also include shipping costs.

Similar substitutes to brand names listed above are acceptable as long as they contain the same chemical and active ingredients percentages. Contract is not limited to only these products and the quantity of each product will depend on price and work load of ISN. The prices given must be fixed for the full term of the contract (until December 31, 2025); prices cannot change from one year to the next. ISN reserves the right to award the contract to the bid that gives the best overall price for all three products and is not required to award bids on a product by product basis.

Please fill out the bid form below and submit it to the contact provided below no later than the end of the business day on April 22, 2023.
